

Avatec[®] is the only in-feed coccidiostat licensed for use in UK game birds

You must not allow any game birds of a shootable age access to feed containing Avatec[®]

All feeders containing Avatec[®] / medicated feed must be empty prior to topping up with non-medicated feed

For meat to be safe for human consumption a 5 day withdrawal period is required *

Always store medicated feeds and feeds containing Avatec[®] separately from plain feeds and use medicated feed up first

*All game meat should be fit for human consumption whether for domestic or export use
