

FEMAS Sector Note No. 12 - Vegetable Fats and Oils

These Sector Notes apply to businesses processing/ blending or placing on the market vegetable fats and oils for use as animal feed.

Where oilseeds and/ or oil fruit are processed on the same site and included in the certification scope, Sector Note No. 6 Oil Seed and Oil Fruit Processing must also be applied.

These Notes are not exhaustive, are intended to assist in the application of the corresponding requirements of the FEMAS Standard and are not to be considered in isolation.

Section 1 of these Sector Notes includes definitions of specific relevance to this sector.

Section 2 of these Sector Notes includes additional sector-specific information to assist Participants in complying with **Requirements, Interpretation, Guidance and Further Information** of the FEMAS Scheme. The FEMAS Scheme Rules provide the following definitions:

Requirement – Sets mandatory standards with which Applicants and Participants must comply to achieve and maintain certification.

Interpretation – Provides specific means for Applicants and Participants to achieve the desired outcome of the preceding Requirement. Applicants and Participants are expected to consider Interpretation and apply as relevant to their business. Failure to follow interpretation, resulting in the desired outcome of the Requirement not being achieved will lead to a non-conformance being raised against the requirement.

Guidance – Non-mandatory suggestions of useful tools and techniques for achieving and maintaining compliance or continuous improvement.

Further information – External sources of useful information, typically including references/ web links to documents or other sources of information.

NOTE: Revisions introduced in this edition of the Sector Notes are highlighted in Blue.

1 Definitions

Vegetable Fats	Oil and fat obtained from oilseeds or oil fruits (excluding castor oil from		
and Oils	the Ricinus plant).		
Used Cooking	Vegetable oils having been used by catering establishments, or oils from		
Oil (UCO)	food factories which have been in contact with meat, animal fats, fish or		
	aquatic animals. Not permitted for use in animal feeds.		
Used food	Vegetable oils having been used by food business operators in		
factory	accordance with Regulation (EC) No 852/2004 (as amended) for cooking		
vegetable oils	purposes and which have not been in contact with meat, animal fats,		
	fish or aquatic animals.		

Page **1** of **6**

Products	Any product derived directly or indirectly from crude or refined oils and	
derived from	fats by oleochemical or biodiesel processing or distillation, chemical or	
oils and fats	physical refining, other than the refined oil or feed additives.	
Mixed Unused	Produced from unused vegetable oils, margarines, shortenings and	
Vegetable Oils/	spreads that are returned in original packaging to the producer, or a	
De-Packaged Oils	processor, or have never left the producer's site as they are deemed	
	unacceptable due to reasons such as: shelf life, unacceptable colour or	
	smell, failed QC, etc. These may also include material held in bulk	
	storage tanks on the producer's site.

2 Sector-Specific Notes

HACCP and Feed Safety Risk Assessment		
B 1.7	Interpretation	Sector-specific potential hazards in raw materials include but are not limited to: • Pesticides • Dioxins and Dioxin-like PCBs • The presence of animal fats

Raw Materials and Raw Material Suppliers		
C 1.2	Requirement	Participants must carry out effective physical audits of all sites supplying used food factory vegetable oils prior to first supply unless these sites are already certified in their own right to a scheme recognised by AIC and with a scope including the raw materials and/ or feed supplied.
C1.2	Requirement	Suppliers of used food factory vegetable oils within the UK/EU must be Feed Business Operators registered or approved by their national authorities under the Feed Hygiene Regulations 183/2005 (as amended).
C 1.2	Further Information	Where used food factory vegetable oils are sourced, the Certification Body will select a number of suppliers to be visited each year. This will typically be at least two collection sites per processing plant unless robust risk assessments and controls operated by the Participant allow this to be reduced.
C 1.4	Requirement	For all suppliers of used food factory vegetable oils, Participants must have in place contracts which specify, as a minimum, the following feed safety criteria: • A statement indicating the intended use as animal feed • A specification listing the types of used food factory vegetable oils included in the contract, and as, appropriate those which must be excluded • The requirement for all businesses in the supply chain (including 3rd party 'waste' contractors and hauliers) to be registered as feed businesses.
C 1.4	Requirement	Where the following fats and oils are used, the indicated specifications must apply:

Page 3 of 6 1 October 2024

Acid Oils
Moisture & Impurities: <3% Fatty Acid Profile: Reflects parent oil (e.g. Soya Acid Oil will have the fatty acid profile of Soybean Oil)
Food Factory Vegetable Oil: Vegetable oil directly sourced from factories processing food products. Fatty acid profile must match the constituent oils. Free Fatty Acid maximum 5%.
Mixed Unused Vegetable Oils/ De-Packaged Oils: Fatty Acid profile must match constituent oils.
The following materials must NOT be used in FEMAS-certified feeds: • Food factory vegetable oils which have been in direct contact with meat, fish or other animal by-products prohibited in feed • Tank Bottoms • Tanker Washings • Effluent Processing Material • Used Cooking Oil (UCO) • Oil Recovered from Mineral Filters • Distillation Residues • Any oils or fats not intended for feed use • Any oils or fats of unknown origin

Labelling		
F 3.2	Requirement	Sales contract or delivery documentation must include the following statement:
		'The batch, or all batches of the components thereof, from which this delivery is drawn have been tested (as required) and are all in compliance with Commission Regulation (EU) 183/2005 (as amended).'

Page **4** of **6** 1 October 2024

Process Cross-	Process Cross-Contamination Controls		
H 10.1	Requirement	Where blanking plates and/ or locked valves are used to segregate feed products from non-feed products, validation must be undertaken initially, and on a regular subsequent basis not exceeding 12 months, to confirm that the initial and ongoing integrity of each blanking plate and valve. Records must be kept to demonstrate this.	

Feed Samples		
I 3.1	Requirement	Where Crude Vegetable Oils are received or delivered
		by ship, analysis should be available for each vessel.
		Where material is received from a number of ship's
		tanks into a number of land tanks, each land tank
		should be tested.

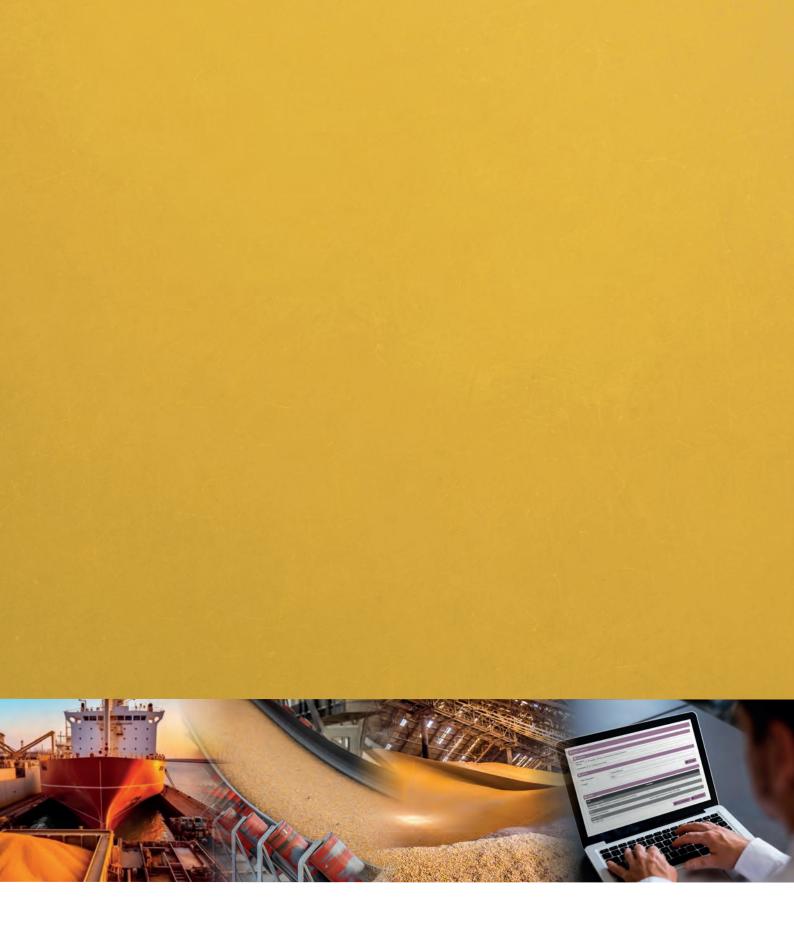

Analysis		
15.1	Requirement	The batch, or all batches of the components thereof, from which any delivery has been drawn must have been tested for the following parameters prior to blending or sale: • Free Fatty Acid (FFA) • Moisture & Impurities (M&I) • Monomeric Fatty Acids (Elutables) • Fatty Acid Profile The following parameters must be analysed in accordance with legislation and the requirements of the AIC Feed Safety Analysis Calculator. • Pesticides • Dioxins • Dioxins-like PCBs • Non-Dioxin-like PCBs

Testing Facilit	Testing Facilities			
17.3	Requirement	Analysis of Dioxins, Dioxin-like PCBs and Non-Dioxin-		
		like PCBs must be undertaken by laboratories that utilise analytical methods in accordance with		
		Commission Regulation (EC) 152/2009 (as amended),		
		which prescribes the methods to be used.		

Page 5 of 6 1 October 2024

Evaluation of Test Results		
I 8.2	Requirement	Where Dioxin, Dioxin-like PCB and Non-Dioxin-like PCB
		results exceed the action limits in Annex II of Directive
		EC 2002/32 (as amended), an investigation as to the
		cause must be carried out.
